

How to retrieve data from the Whysor API

Whysor API - Device & Sensor Data

Overview

This document describes how to retrieve devices, sensors, and sensor measurements using the Whysor API.

The API allows users to:

- Retrieve devices they have access to
- Retrieve sensors belonging to devices
- Read the latest sensor values
- Read historical sensor measurements

All API requests require authentication.

Authentication

All requests require an authorization header.

Example:

```
Authorization: <token>
Content-Type: application/json
```
